

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

A 1
1. (currently amended) A method for setting up a telecommunication connection between an A-party located in a first country and a B-party located in a second country using a switched telecommunication system that includes a switched telecommunication network comprising a digital mobile telecommunications network, a telecommunication terminal of the A-party and connected to the switched telecommunication network, a telecommunication terminal of the B-party and connected to the switched telecommunication network, and a telecommunication server connected to the switched telecommunication network and comprising means for handling messages and setting up telecommunication connections, comprising the steps of:

sending, from the A-party telecommunication terminal to the telecommunication server, a call setup message using the switched telecommunication network and without establishing a telecommunication connection between the A-party telecommunication terminal and the telecommunication server;

setting up, at the telecommunication server, a first telecommunication connection from the telecommunication server to the A-party telecommunication terminal;

setting up, at the telecommunication server based on the call setup message received from the A-party telecommunication terminal, a second telecommunication connection from the telecommunication server to the B-party telecommunication terminal; and

connecting together, at the telecommunication server, the first and second telecommunication connections to establish a telecommunication connection from the B-party telecommunication terminal to the A-party telecommunication terminal.

2. (original) A method in accordance with claim 1, wherein the call setup message contains a telephone number of the B-party.

3. (original) A method in accordance with claim 1, further comprising the steps of:

AI identifying, at the telecommunication server, a subscription of the A-party; and directing, to the A-party subscription, call charges for the telecommunication connection from the B-party telecommunication terminal to the A-party telecommunication terminal.

4. (original) A method in accordance with claim 1, wherein the call setup message comprises a USSD message.

5. (currently amended) A system for setting up a telecommunication connection between an A-party located in a first country and a B-party located in a second country using a switched telecommunication system that includes a switched telecommunication network comprising a digital mobile telecommunications network, a telecommunication terminal of the A-party and connected to the switched telecommunication network, and a

telecommunication terminal of the B-party and connected to the switched telecommunication network, the system comprising:

A) a telecommunication server connected to the switched telecommunication network and operable for handling messages and setting up telecommunication connections, said server comprising means for identifying a subscription of the B-party from a call setup message received by said server from the A-party telecommunication terminal, the call setup message being received using the switched telecommunication network and without establishing a telecommunication connection between the A-party telecommunication terminal and said server, means for setting up a first telecommunication connection from ~~the~~ said server to the A-party telecommunication terminal and a second telecommunication connection from ~~the~~ said server to the B-party telecommunication terminal based on the call setup message, and means for connecting the first and second telecommunication connections to establish a telecommunication connection from the B-party telecommunication terminal to the A-party telecommunication terminal.

6. (original) A system in accordance with claim 5, further comprising means in the A-party telecommunication terminal for sending the call setup message from the A-party telecommunication terminal to said server.

7. (original) A system in accordance with claim 6, where said means in the A-party telecommunication terminal comprises means for including a telephone number of the B-party in the call setup message.

8. (original) A system in accordance with claim 5, wherein said server further comprises means for identifying a subscription of the A-party and for directing, to the identified A-party subscription, call charges for the telecommunication connection established from the B-party terminal to the A-party terminal.

A1

9. (original) A system in accordance with claim 5, wherein said server further comprises means for handling USSD messages.
